Food casing provided with an antimicrobial finish

5 Abstract

The invention relates to a preferably tubular food casing based on synthetic material, in particular polyamide, in which the layer, or at least one of the layers, comprises at least one metal salt having 10 antimicrobially active metal ions. The metal salt preferably comprises ions of silver, copper or zinc. In the event of a multi-layered casing, the at least one layer comprises a said metal salt. production of the casing, preferably a master batch is 15 used which comprises about 5 to 40 % by weight of the metal salt. The food casing is preferably used as artificial sausage casing.
